WHAT IS AN AIR PURIFIER?

An air purifier is a device which removes contaminants from the air in a room to improve indoor air quality. These devices are beneficial to allergy sufferers and asthmatics, and at reducing or eliminating odors in the room. The part that removes these contaminants is the filter.

INDOOR AIR QUALITY

Indoor air quality is how we measure the quality of the air inside a room. IAQ is known to affect the health, comfort and well-being of the occupants. According to the EPA, the air in your home or office can be 2 to 5 times worse than the outdoor air. In some cases, it has been as high as 100 times more polluted. The average person spends 90% of their time indoors.

WHAT AND WHEN TO USE **HEPA FILTER**

A person takes 20,000 - 30,000 breathes each day. HEPA (high-efficiency particle air) Filter is designed to remove 99.9% of airborne particles. However, there are many levels of HEPA efficiency, and most air purifier companies use a lower level material to help boost their units square foot coverage claims.

H13

H13 MEDICAL GRADE HEPA - Captures 99.9% of particles down to 0.1 microns. Commonly referred to as 'medical grade filtration' as it relates to the purity of the air filtered.

H11

H11 TRUE HEPA - Most air purifiers on the market. Captures 95% of particles down to 0.1 microns, missing many of the most concerning particles. (See Chart Below)

HOW DOES IT WORK?

At the base of it all, an air purifier is a motor and a fan that draws the air in the room into the unit and forces that air through the filter. The purified air is then returned to the room. The unit continues this cycle over and over again to further improve the air quality. It's recommended that you run an air purifier 24/7.

WHY ARE MEDIFY AIR FILTERS SPECIAL?

3-IN-1 FILTERS

Medify Air has a Prefilter to capture large particles like hair and dust.

With H13 True HEPA Filter to capture harmful airborne particles.

An activated Carbon Filter to eliminate annoying and toxic odors from the room.

The key is producing an airtight seal so there is no leakage of dirty air bypassing the filter and returning to the room. All Medify filters produce the needed airtight seal.

BASED ON 99.9% PARTICLE REMOVAL

MOST AIR PURIFIERS

H11 TRUE HEPA
